

# LaZer Cutting Grids cost comparison

Please note that these prices DO NOT reflect shipping costs either!

As you will see below our prices are the lowest in the industry. The laser cutting grid, or table as some manufactures call it, are made of honeycomb aluminum that bends, breaks and gets dented quite often. Ours grids are made of much thicker powder coated aluminum that will hold up much longer than any other. Note: All of the prices of available grids are not here due to the manufacturer's unwillingness to give out there prices to a competitor. We got what we could.
